

UNLIMITED VIEW

Unlimited VIEW (Vision-based Intelligent Electronic Warnings) is an intelligent camera-based system for tractor operators that increases safety in traffic, on the field and around the farm.

- The system automatically detects crossing traffic and people behind and in front of the tractor when driving with front implements, such as front tanks, snow ploughs, lawnmowers etc.
- The system uses in-tractor information to automatically switch between relevant cameras and artificial intelligence to warn the driver of critical hazards.
- The information is brought to the operator as acoustic & visual messages on an 11.6" high-resolution screen.
- Developed in collaboration with farmers to increase safety, eliminate downtime and reduce operator fatigue.

Q&A

Can additional cameras be installed?

- Yes. You can add an extra camera on your trailer. Future versions of Unlimited VIEW may support more cameras. Please contact Valtra Unlimited special requests.

What is the fastest way to move the system from one machine to another?

- It is recommended to purchase additional sets of cameras to mount on different trailers, rear and front implements. This will make switching between machines very fast.

Does it come with a warranty?

- Yes, Unlimited VIEW comes with the same warranty as the tractor from the factory.

Is the system DLC certified?

- We are in the progress of getting the system approved by DLC in Germany.
